The original claims 1-64 and the newly added claims 65-66 are presented for examination.

Due to the preliminary amendment is not in proper form because all added claims should be underlined in their entity. See the old rule 1.121 and the new rules 1.121(h) and 1.173(d). The examiner's amendment is necessitated to remedy this defect amendment. Thus, **the examiner's amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Replace claim 65 by -- A method for caching objects including object fragments, and method comprising the steps of:

a client receiving from a server an object including an object description wherein at least one object fragment is referenced by an associated persistent object fragment identify based on one or more of: formal descriptors; and an object fragment property, in response to a request for the object; and

the client processing the object description including the associated persistent object fragment identity. --

Replace claim 66 by -- A program storage device readable by a machine, tangibly embodying a program of instructions executable by the machine to perform method steps for processing objects including object fragments, said method steps comprising:

a client receiving from a server an object including an object description wherein at least one object fragment is referenced by an associated persistent object fragment

identify based on one or more of: formal descriptors; and the client processing the object description including the associated persistent object fragment identity. –

Pursuant to 37 C.F.R. 1.109 and M.P.E.P. 1302.14, the following is an Examiner's Statement of Reasons for Allowance:

The prior arts of record do not teach a system for identifying and creating persistent object fragments from a name objected and for dynamically parsing a digital content description of a name digital object, creating and maintaining fragment identities to facilitate caching. A system can analyze the object description, identify object fragments and create persistent object fragment identities, and revise the object description by replacing each fragment with its newly created persistent identity and sent the revised object description to the request client.

The examiner considers the applicants' claims 1-66 to be allowable based on the claim interpretation and the aforesaid prior arts of record.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references are cited in the Form PTO-892 for the applicant's review.
